

IN THE CLAIMS

The following is a complete listing of claims and replaces all prior versions and listings of claims in the present application:

Claim 1-11 (canceled).

12. (currently amended): An access system comprising:
a receiving device for receiving an image picked up by an image pickup device,
which is controlled based on a control command of a direction of the image pickup device, and
information on the area where the image is picked up by the image pickup device, which is
controlled in response to the control command; and

a control device for, when it is determined determining whether the image
received by said receiving device includes a predetermined image based on the information on
the area where the image is picked up by the image that the image received by said receiving
device includes a predetermined image, pickup device, and executing processing for accessing an
address corresponding to the predetermined image by referring to a memory storing an address
corresponding to the picked-up image, based on a result of the determination.

13 (original): An access system according to Claim 12, wherein, when the
image received by said receiving device is included within the predetermined image, said control
device causes program code to run for accessing the address corresponding to the predetermined
image.

14. (original): An access system according to Claim 12, wherein the address includes a URL.

15. (original): An access system according to Claim 12, wherein the address includes an email address.

Claims 16-26 (canceled).

27. (currently amended): An access method comprising the steps of:
receiving an image picked up by an image pickup device, which is controlled
based on a control command of the direction of the image pickup device, and information on the
area where the image is picked up by the image pickup device, which is controlled in response to
the control command; and

when it is determined, determining whether the received image includes a
predetermined image based on the information on the area where the image is picked up by the
image[[],] pickup device; and

that the image received in said receiving step includes a executing processing
for accessing an address corresponding to the predetermined image[[],] by referring to a memory
storing an address corresponding to the predetermined pickup image, and executing processing
for accessing the address corresponding to the predetermined image based on a result of the
determination.

28. (original): An access method according to Claim 27, further comprising
the step of:

running program code for accessing the address corresponding to the
predetermined image, when the image received in said receiving step is included within the
predetermined image.

29. (original): An access method according to Claim 27, wherein the address
includes a URL.

30. (original): An access method according to Claim 27, wherein the address
includes an email address.

Claims 31-41 (canceled).

42. (currently amended): A storage medium storing a program for executing
an operational processing method of an access system, wherein the program comprises:

program code of a reception step, of receiving an image picked up by an image
pickup device, which is controlled based on a control command of a direction of the image
pickup device, and information on the picked-up area where the image is picked up by the image
pickup device, which is controlled in response to the control command; and
when it is determined program code of a determination step, of determining
whether the received image includes a predetermined image based on the information on the

picked-up area where the image that the image received in the reception step includes a predetermined image; is picked up by the image pickup device; and
program code of an access step, of executing processing for accessing an address corresponding to the predetermined image by referring to a memory storing an address corresponding to the picked-up image, based on a result of the determination.

43. (original): A storage medium according to Claim 42, wherein, when the image received in the reception step is included within the predetermined image, access step runs software for accessing the address corresponding to the predetermined image.

44. (original): A storage medium according to Claim 42, wherein the address includes a URL.

45. (original): A storage medium according to Claim 42, wherein the address includes an email address.
